Homework 2: Requirement Elicitation

Group 5: Rui Zhang, Shunkang Jia, Yuning Liu

September 18, 2025

1 Glossary

Table 1: Roles within the Event Planning System

Role	**Description**
Client	The person or organization who needs to request an event planning service from SEP, providing basic details and later discussing preferences and budget if approved.
Customer Service Officer	The person who needs to handle event planning requests from clients and communicate them to the senior customer service or management.
Senior Customer Service Officer	The person who needs to study new requests, reject them when necessary, or forward them to the financial and administration managers for further evaluation.
Administration Manager	The person who needs to use his long experience to contribute in handling event planning activities.
Financial Manager	The person who needs to cooperate with the production manager to plan budgets for decorations, food, beverages, and photographing.
Financial Department	The department who needs to manage employees' salaries and financial issues.
Production Manager	The person who needs to cooperate with the financial manager to plan the required budget for decorations, food, beverages, and photographing.
Decoration Specialist	The team who needs to handle decoration tasks for events.
Filming Specialist	The team who needs to film events, take pictures, and prepare short films.
Audio Specialist	The team who needs to handle music and audio requirements during events.
IT Support Specialist	The team who needs to handle all computer-related issues for events.

Table 1: Roles within the Event Planning System

Role	**Description**
Service Manager	The person who needs to manage the services department, handling food and beverages and coordinating chefs and waiters.
Chef	The person who needs to prepare food for events.
Waiter	The person who needs to serve food and beverages during events.
HR Manager	The person who needs to manage staff recruitment and outsourcing.
HR Assistant	The person who needs to prepare job ads, contracts, and arrange interviews.
Marketing Officer	The person who needs to attract clients, attend conferences and business gatherings, meet business persons and company members to advertise SEP's work, and prepare presentations and demos.
Marketing Assistant	The person who needs to help with calls, and search for announcements about business meetings.
Vice President	The person who needs to generate summary reports about employees' utilization, clients, and events' statistics.
Secretary	The person who needs to assist the vice president in documentation and communication.

Table 2: Business Concepts

Concept	**Description**
Client Record	The record that needs to be created for each new client and updated when required.
Event Planning Request	The request that needs to be submitted by a client, recorded in a form by the customer service team, and sent to their manager for further processing.
Task	The work item that needs to be sent by the production manager to different sub-teams, who then check the requirements and prepare their plan.
Sub-team	The group that needs to receive tasks from the production manager, check the requirements, and prepare their plan to accomplish them.
Application Status	The status that needs to indicate the lifecycle of a request: open, in progress, or closed.

Table 2: Business Concepts

Concept	**Description**
HR Request	The request that needs to be initiated when a sub-team does not have enough staff and additional resources are required.
Budget Adjustment Request	The request that needs to be filled by production or service managers and sent to the financial manager when more budget is needed.
Report	The output that needs to summarize statistics about employees, clients, and events.

Table 3: System-related Terms

Term	**Description**
Work Items List	The list that needs to show pending requests or tasks assigned to each role in the system.
Client Record	The record that needs to be created and updated in the system to keep client information.
Event Database	The database that needs to store the history of all organized events.
Scheduling Information	The information that needs to include staff schedules, so that managers can plan resources for future activities.
Access Control	The mechanism that needs to ensure each role has different view and only accesses functionalities relevant to them.

Table 4: Use Case Glossary

Term	**Description**
Task Planning and Allocation System	This is the system that is accessed when preparing an event.
Login	The event for system users to login.
Check human resources	The manager checks the human resources on the system. It includes the use case 'HR Request due to Lack of Staff'.
Fill application form	The manager fills the event form based on the requirements.
Send form	The user chooses to send a form to another receiver.
Fill the form with the plan	The Sub-teams fill their form with detailed plans about the part they play in the event.
Make feedback	The Sub-teams can add feedback if they need an extra budget.

Table 4: Use Case Glossary

Term	Description
Check the feedback	The manager checks the feedback that is submitted by their team members, this extends to the use case 'Budget Adjustment Request'.
Add advice	The manager can add advice to the plan their team made based on their knowledge .
Resend the form	The manager can send the form back to members once the budget is settled and they have made the suggestion.
Make final version	The team members have come up with a final version of their event and are ready to implement the event.
Hold the event	The event was successfully held.
System status change	The event can have three statuses while it is implemented including 'open', 'in progress', and 'closed and archived'. The status of event changes once a certain operation is being made.

2 Identified Actors of the Problem

The following is a list of actors who interact with the system.

- **Customer Service Officers**: Users who need to enter clients' requests into the system.
- **Senior Customer Service Officer**: User who needs to review new requests and update client records.
- **HR Team**: Users who need to process recruitment and outsourcing requests in the system.
- **Marketing Team**: Users who need to manage marketing information and generate client/event reports.
- **Administration Manager**: User who needs to make the final decision on requests and approve/reject them in the system.
- **Financial Manager**: User who needs to review budgets, handle financial issues, and manage salaries.
- **Production Manager**: User who needs to distribute tasks to production sub-teams via the system.
- **Service Manager**: User who needs to assign tasks to service sub-teams via the system.

- **Operation Manager**: Abstract User that can be genearalized into Service Manager and Production Manager.
- **Operation Staff**: Users who are employees in the production and service department such as chef,waitress, IT and decorating specialist.
- **Vice President**: User who needs to generate summary reports about employees, clients, and events.

3 Scenerio

3.1 New Request Processing

Scenario name	**New Request Processing**
Participating actor instances	sarah:CustomerServiceOfficer janet:SeniorCustomerServiceOfficer alice:FinancialManager mike:AdminManager jack:ProductionManager natalie:ServicesDepartmentManager
Flow of events	1. A new client contacts the Customer Service team, speaking with Sarah. The client details their requirements and estimated budget for a project. Sarah records this initial data. 2. Sarah accesses her workstation and uses a form to input the client's request. This form includes all relevant details. She then submits the completed form to her manager, Janet. 3. Janet receives a notification of the new request. She reviews the details and approve it on the system. Then she forwards the request to the Financial Manager, Alice. 4. Alice reviews the request and the client's budget estimate. She provides her feedback on the financial feasibility of the project. 5. Alice redirects the request to the Administration Manager, Mike, along with her financial feedback. 6. Mike reviews the request and Alice's feedback. He makes the final decision to approve the request. 7. Janet is notified of Mike's final decision. She contacts the client to schedule a meeting to discuss their preferences and the planned budget.

3.2 Outsource new staff

Scenario name	**Outsourcing New Staff**

Participating actor instances	natalie:ServeceDepartmentManager simon:HRManager maria:HRAssistant
Flow of events	1. Natalie, the Services Department Manager, checks the staff availability for an upcoming client event after a meeting. She discovers that Lauren and Johnny, who are scheduled to work as waitresses, are unavailable due to a conflicting birthday party. 2. Recognizing the shortage, Natalie initiates an outsourcing request to the HR team through the system. 3. The request is received by both Simon, the HR Manager, and Maria, the HR Assistant. 4. Maria publishes a job advertisement for two new waitresses. 5. Simon reviews the applications and conducts interviews for the position. 6. Simon successfully hires two suitable candidates, Amy and Bob, to fill the positions.

3.3 Raise Budget Scenario

Scenario name	**Budget Negotiation**
Participating actor instances	jack:ProductionManager magy:DecoratingArchitect alice:FinancialManager
Flow of events	1. Jack, the Production Manager, fills out a client application from his department. He then assigns tasks to his sub-teams. The application's status is set to open. 2. One of Jack's sub-teams, led by Decorating Architect Magy, receives the task. Magy and her team plan for the event's decoration. 3. Magy realizes that to achieve the advanced lighting effects requested by the client, they will need to rent specialized equipment. She edits the task, adds a comment requesting an additional 5000 SEK, and submits it. 4. Jack reviews the comments from all sub-teams. He sees Magy's request for an extra 5000 SEK and decides to initiate a budget negotiation with the Financial Manager, Alice. 5. Jack sends the request to Alice, explaining the need for the additional budget to meet the client's expectations for advanced lighting. 6. Alice reviews the request. She contacts the client and successfully get the additional 5000 SEK for the advanced lighting.

	7. Alice approves the budget raise and informs Jack to proceeds with the application.

3.4 Event Request Rejected

Scenario name	**Event Request Rejected**
Participating actor instances	sarah:CustomerServiceOfficer janet:SeniorCustomerServiceOfficer alice:FinancialManager mike:AdminManager
Flow of events	1. Sarah, the Customer Service Officer, receives a new client request. She records the client's initial details, including the type of event and expected date. 2. Sarah enters the request into the system form and forwards it to her manager, Janet, the Senior Customer Service Officer. 3. Janet reviews the request and confirms that it contains all required information before sending it to Alice, the Financial Manager. 4. Alice evaluates the client's estimated budget and writes financial feedback, noting that the proposed budget is insufficient to cover the expected expenses. 5. Alice forwards the request together with her financial feedback to Mike, the Administration Manager, for a final decision. 6. Mike reviews the request and Alice's feedback, and decides that the request cannot be accepted under the current conditions. He rejects the request. 7. Janet is notified of Mike's decision and contacts the client to inform them that their request has been rejected, explaining that the budget does not meet company requirements.

3.5 Task Planning and Allocation

Scenario name	**Task Planning and Allocation**

Participating actor instances	Production Manager: Jack Photographer: Tobias Photographer: Magdalena Audio Specialist: Antony Audio Specialist: Adam Decorating Architect: Magy Network Engineer: Christian Network Engineer: Nicolas Technician: Michael Technician: Robert Service Department Manager: Natalie Top Chef: Helen Senior Waitress: Kate
Flow of events	1. After the meeting, Jack and Natalie are respectively responsible for task allocation in the Production department and Services department according to the requirements. 2. Jack checks availability of Production department (Tobias, Magdalena, Antony, Adam, Magy, Christian, Nicolas, Michael and Robert) while Natalie views the situation of Services department, and if there is a shortage, an extension to the Require Human Resource will be activated. 3. The members are well prepared for this event. 4. Jack and Natalie assign tasks through online forms. 5. Members receive the forms and begin working for the event, while the status of the event is set to open online. 6. Everyone fills out the expected schedule and provides feedback on the online form. 7. After different members have modified the online form, Jack and Natalie can use it. 8. Jack and Natalie review the form and check the feedback. 9. If additional budget is required, Jack and Natalie will open an extension to negotiate the budget. 10. Budget issue is resolved, and the event status is set to 'in progress'. 11. Jack and Natalie have put forward some suggestions based on the current situation. 12. The table is once again open to members, who will modify their original plans based on the suggestions provided. 13. The members have developed the final version of the schedule. 14. The event has been successfully held, with the event status set to 'closed and archived'.

4 Identified Use Case

We have a overall use case diagram that explains the whole system functionality in Fig1.

4.1 Enter Event Planning Request

Use Case	**Handle Event Request**
Participating Actors	Initiated with `Customer Service Officer` Communicates with `Senior Customer Service Officer`
Entry Condition	A client has contacted the customer services team with a new event planning request.
Flow of Events	1. The scenario starts when `Customer Service Officer` opens the request form in the system. 2. `Customer Service Officer` records the client's details, including contact information, event description, and estimated budget. 3. After completing the form, `Customer Service Officer` submits it to `Senior Customer Service Officer` 4. `Senior Customer Service Officer` reviews the request to check for completeness and correctness. 5. 5. If the information is clear and complete, `Senior Customer Service Officer` forwards the request to the financial manager for budget review. 6. 6. If the information is incomplete, `Senior Customer Service Officer` either updates the request or returns it to `Customer Service Officer` for correction.
Alternative Flow	1. If the client provides incomplete or unclear information, `Senior Customer Service Officer` returns the request to `Customer Service Officer` for correction before forwarding it to the financial manager.
Exit Condition	The request is stored in the system and verified by the senior customer service officer.

Figure 1: SEP Intra System Use Case Diagram

4.2 HR Request

Use Case	**HR Request due to Lack of Staff**
Participating Actors	Initiated with `Operation Manager` Communicates with `HR Team`
Entry Condition	A request has been approved and tasks are distributed to sub-teams.
Flow of Events	1. `Operation Manager` assigns tasks to relevant sub-teams. 2. `Operation Manager` checks the assigned tasks and realizes that they do not have enough staff to handle them. 3. `Operation Manager` initiates an HR Request to ask for additional resources,either to recruit or outsource. 4. `HR Team` receives the request and publish job advertisement and schedule interviews to find the required staff. 5. Once additional staff are available, `Operation Manager` sets application status to "open" and continues with task execution.
Alternative Flow	If `HR Team` cannot provide additional staff in time, `Operation Manager` must reschedule tasks or adjust the event plan.
Exit Condition	After `HR Team` provides additional resources,`Operation Manager` set the application status to "open".

4.3 Budget Adjustment Request

Use Case	**Budget Adjustment Request**
Participating Actors	Initiated with `Operation Staff` Communicats with `Operation Manger, Financial Manager`
Entry Condition	A request has been approved, tasks have been assigned, and `Operation Staff` identifies potential budget issues while preparing their plans.
Flow of Events	1. `Operation Staff` prepare their plans and add comments/remarks to the tasks. He/She may raise budget adjustment request. 2. `Operation Manager` reviews the comments. 3. If budget issues are detected, `Operation Manager` asks `Financial Manager` to initiate budget negotiation. 4. `Financial Manager` views budget request and negotiates with the Client regarding the budget. 5. The system suspends processing until the budget agreement is reached between the Client and the Financial Manager. 6. Once an agreement is reached, the event proceeds based on the updated budget.
Alternative Flow	If the client and `Financial Manager` cannot reach an agreement, the application remains pending and cannot proceed.
Exit Condition	After `Financial Manager` and the client reach agreement on the budget, `Operation Manager` set the application status to in progress, and after finalizing the event time, the status is set to closed and archived.

4.4 Task Planning and Allocation

Use case	Task Planning and Allocation
Participating actors	Managers (Including Production Manager and Services Department Manager) Sub-team (Including teams of Production department and teams of Services department)
Entry Condition	Get the requirements from the meeting. The managers successfully make clear the requirements.
Flow of Events	1. The managers check the availability of human resources. (Include use case HR Request due to Lack of Staff). 2. The managers fill in an application form for his/her own department. 3. The managers send the form to corresponding sub-teams. 4. The system displays the form to the corresponding sub-team. 5. Sub-team fill in the form with an expected plan, where the feedback of shortage in budget or materials may be added. 6. The event status is updated with 'open'. 7. The sub-team sends the form back to managers. 8. The managers review the feedback. 9. The managers add advice to the form. 10. The managers choose to resend the form to the sub-team. 11. The status of the event is set to 'in progress'. 12. The system displays information to the sub-team. 13. The sub-team makes modifications based on the advice. 14. The sub-team conducts the plan to finish the event. 15. After finishing the event, the status is updated with 'closed and archived'.
Alternative Flow	Extend to use case Budget Adjustment Request when the extra budget is required
Exit Conditions	The status of the activity is set to 'closed and archived'.

5 Nonfunctional Requirement

5.1 Usability

Each role in the system must have a different view due to the difference in the functionalities they can access.

5.2 Reliability

All active and previous clients records, history of all organized events and records of all staff members, including their assignment history should be complete (no missing). The system must have a redundant disk system or make automatic backups at a certain

frequency.

5.3 Performance

When the application status is open, both product team and service team can view and edit the application at the same time (work in parallel).

5.4 Supportablility

The system must be able to adapt to changes in the number of employees, as the number of employees in each department might change according to the organization's needs.
